It's Your Restaurant,
 your money
 and your TIME
 So Make A Wise Investment!

You can't control time, but you can manage it. And now, RMS-TOUCH POS can help with our state of the art point of sale system. RMS-TOUCH will improve the efficiency and profitability of your restaurant in several specific areas by Reducing Errors that erode your profits, Maximizing Your Sales and Server Productivity, and Increasing Overall Customer Satisfaction. This improvement can easily mean increased profits of **Tens of Thousands of Dollars** annually for your restaurant!

RMS-TOUCH is a clear choice with years of experience as a leader in Restaurant Touchscreen POS, Thousands of satisfied restaurant users around the world, and a constantly developing system that is produced by a dedicated and innovative team of POS experts. This is RMS-TOUCH Point of Sale- a PC Based Restaurant Touchscreen system that is incredibly fast, dependable, efficient, easy to learn, very easy to train and use. RMS-TOUCH is flexible enough to meet the needs of restaurant users of all types from single unit independents to multi-unit national chains. From full service restaurants to quick service, cafeterias, countrydubs and nightdubs RMS-TOUCH POS can help you make more money!

New: 3-Dimensional POS Order Entry Screens

Graphical Table Management

Increase your sales up to **10 %** by increasing the number of covers and the average per check. Our graphical interface speeds up order entry and staff training. The POS alerts you to when customers are waiting, when your bar customers need a new drink and when tables are available. From any of the POS workstations table status can be instantly changed from "Cleaning" to "Available" so new tables may be seated immediately without guessing if a table is clean and re-set. If your restaurant has multiple rooms or floors, each dining room layout is pre designed and can be viewed and accessed from any POS terminal. The exclusive **Zoom-View** feature allows an

overhead view of the entire restaurant with **real time table status**. The Zoom feature is especially helpful during the busiest hours in large restaurants by displaying all tables that will soon be available to seat. With a touch terminal located at the hostess stand table turns can increase dramatically allowing for **greater revenue** and **higher profits** every day!

Exclusive Restaurant ZOOM-View feature

Table Management Analysis Reports

Of course the RMS-TOUCH Table Management system also provides you with extensive back office table management reports and graphs- Information you can use to determine average table times, best tables in the restaurants (most productive) and worst tables in the house (least productive). Find out which waiters are selling not only the most items, but who is generating the highest revenue **per hour**. There are six different color graphs available including Best Tables Per Hour in Sales, Highest Average Sales By Table, Lowest Performing Tables In Sales and more.

Server Productivity Reports That Boost Sales

The RMS-TOUCH Server Salesmanship Report sets a new industry standard for waiter productivity reports. Where many other systems show you some information you may want to see, RMS-TOUCH provides you with information you need to see. With our Salesmanship Report, you see not only what items a waiter sold, but what they could have sold based on total numbers of customers and tables served. For example, lets say a waiter sold 3 bottles of wine in a single shift, that may be at first appear to be good selling. But consider that the same waiter had 30 separate tables that same shift. The Salesmanship Report shows you that the waiter sold 3 bottles of wine to only 10% of their tables. Find out in a concise report what your restaurant averages are per sales category [Appetizers, Desserts, Wine, etc] and which servers are performing below, at or above average. With this report, weak servers can be trained to push high profit items, and strong servers can be rewarded which will increase the profitability of your restaurant. The bottom line for you? **More sales means higher Profits!**

Each sales category shows 3 numbers:

- Shows the number of checks with No items sold within this category.
- Server sales potential where each guest orders one item.
- Server productivity. To be compared to servers average. The higher the better.

This report makes waiter productivity analysis a snap.
